Section A

INDEX TO VOLUME XV

Authors

Babbitt, J. D.—The spectrum of α-Lyrae, 161.

Burns, E. L. M. and Field, R. H.—The radial-stereoplotter, 85.

Clark, A. L.—Probability experimentally investigated, 149.

Dockerty, S. M.—The specific heat of copper from 30° to 200° K., 59.

Field, R. H.—See Burns, E. L. M.

Goodier, J. N.—Thermal stress in long cylindrical shells due to temperature variation round the circumference, and through the wall, 49.

Gray, J. A.—See Penley, H. H., Ward, A. G.

Herbert, W. S., Herzberg, G. and Mills, G. A.—An attempt to detect the presence of metastable atoms in active nitrogen by light absorption, 35.

Herzberg, G.—See Herbert, W. S.

Johns, H. E. and Wilhelm, J. O.—The refractive indices of liquid oxygen, nitrogen, and hydrogen, 101.

Johns, M. W.—The spectrum of doubly ionized mercury, Hg III, 193.

Jordan, E. C.—Automatic gain control, 79.

Langstroth, G. O. and McRae, D. R.—Absorption step-weakeners of antimony, 154.

Laurence, G. C.—The measurement of extra hard X-rays and γ-rays in roentgens, 67.

McRae, D. R.—See Langstroth, G. O.

Marshall, J. S. and Ward, A. G.—Absorption curves and ranges for homogeneous β-rays, 39.

Mills, G. A.—See Herbert, W. S.

Niven, C. D.—Note on the eupatheoscope and the measurement of equivalent temperature in Canada, 25.

Penley, H. H. and Gray, J. A.—The scattering of X-rays at very small angles, 45.

Rose, D. C.—The application to artillery of the photoelectric cell method of measurement of projectile velocities, 1.

The atmospheric potential gradient at Ottawa, Canada, 119.

Ruedy, R.—The coefficient of heat transfer for vertical surfaces in still air, 109.

Tupper, K. F.—Force measurements on stop-log models, 181.

Note on the acceleration of ships, 15.

Ward, A. G.—See Marshall, J. S.

Ward, A. G. and Gray, J. A.—The end points of the β-ray spectra of Radium E and Uranium X_2, 42.

Wilhelm, J. O.—See Johns, H. E.

Section A

INDEX TO VOLUME XV

Subjects

α-Lyrae, Spectrum of, 161.

Absorption step-weakeners of antimony, 154.

Acceleration of ships, Note on the, 15.
Application and numerical example, 23.

Antimony, Absorption step-weakeners of, 154.

Atmospheric potential gradient at Ottawa, Canada, 119.

Automatic gain control, 79.

β-rays, Absorption curves and ranges for homogeneous, 39.

Balmer lines, Profiles of, 168.

Coefficient of heat transfer for vertical surfaces in still air, 109.
Surface coefficient in still air, 115.

End points of the β-ray spectra of Ra E and Ur X_2, 42.

Equivalent temperature in Canada, 25.

Eupatheoscope, Note on the, and the measurement of equivalent temperature in Canada, 25.

Force measurements on stop-log models, 181.

Gain control, Automatic, 79.

γ-rays, The measurement of extra hard, in roentgens, 67.

Heat transfer for vertical surfaces in still air, Coefficient of, 109.

Ionization, Intensity of, in thimble chambers, 68.

Liquid hydrogen, Refractive index of, 107.

Liquid nitrogen, Refractive index of, 105.

Liquid oxygen, Refractive index of, 103.

Mercury, Hg III, The spectrum of doubly ionized, 193.

Metastable atoms in active nitrogen by light absorption, An attempt to detect the presence of, 35.

Photoelectric cell method of measurement of projectile velocities, The application to artillery of the, 1.
Circuits, 6.

Potential gradient at Ottawa, Canada, Atmospheric, 119.

Probability experimentally investigated, 149.

Profiles of Balmer lines, 168.

Projectile velocities, The application to artillery of the photoelectric cell method of measurement of, 1.
Accuracy, 13.

Radial-stereoplotter, 85.
Description of, 89.
Method of plotting control, 92.
Principle of, 87.

Radiation from Ra B and C, Intensity of, 74.

Ra E, End points of the β-ray spectra of, 43.

Ranges, β-rays, 40.

Recording apparatus for measurement of projectile velocities, 3.

Refractive indices of liquid oxygen, nitrogen and hydrogen, 102.

Rutledge pure air system, 31.

Scattering of X-rays at very small angles, 45.

Ships, Note on the acceleration of, 15.

Specific heat of copper from 30° to 200° K., 59.

Spectrum
of α-Lyrae, 161.
of doubly ionized mercury, Hg III, 193.

Stop-log models, Force measurements in, 181.

Thermal stress in long cylindrical shells due to temperature variation round the circumference and through the wall, 49.

Ur X_2, End points of the β-ray spectra of, 43.

X-ray scattering at very small angles, 45.

X-rays, The measurement of extra hard, and γ-rays in roentgens, 67.
Absolute evaluation of X-ray and γ-ray intensities, 74.
